National Drug Treatment Monitoring System (NDTMS)

Reference Data (Dataset R)

V1.2

Contents

1. Introduction

The National Drug and Alcohol Monitoring System (NDTMS) is an English substance misuse treatment data collection that has been in place since 2004. This is hosted within the Office for Health Improvement and Disparities (OHID) in the Department of Health and Social Care.

Statistics derived from the collection (including those designated as Official and National Statistics) facilitate needs-assessment and targeting of resources, assessment of demand for services, evaluation of intervention/harm-reduction strategy effectiveness and service performance, service quality assurance and analyses of substance misusing populations. NDTMS data currently underpins key indicators that support the government's drug strategy.

NDTMS is a national standard and is applicable to young people and adults within community and secure setting-based treatment providers. The dataset is accredited by NHS Digital and the [Information Standard](#) is published under section 250 of the Health and Social Care Act 2012.

This document establishes the text to codal values (the reference data) in use with the NDTMS dataset and will support software suppliers in implementing the dataset.

Reference data is defined as (relatively) static data. Generally, it is employed as a means of validating data entry and will typically be used to control the contents of drop-down lists for example. This document gives the permissible values for each of the reference items in the NDTMS datasets, only values for the relevant dataset should be included in the CSV file. The document is split into the following sections: community, secure settings and outcome profiles.

Data items are applicable to young people and adults within community and secure setting-based treatment providers. The dataset inclusion column provides information regarding which items are relevant to each dataset whereby:

- AD = community adult dataset

- YP = community young person dataset

- SA = secure setting adult dataset

- SY = secure setting young person dataset

This document is intended to be a definitive and accessible source for use. It is not intended to be read from end to end, rather as a reference document which is utilised by a variety of readers, including:

- Interpreters of data provided from OHID systems

- Suppliers of systems to OHID

- Suppliers of systems which interface to OHID systems

- OHID/National Drug Treatment Monitoring System (NDTMS) personnel

This document should not be used in isolation, it is part of a package of documents supporting the NDTMS dataset and reporting requirements.

- NDTMS CSV File Format Specification – defines the format of the CSV file used as the primary means of inputting the core dataset into NDTMS

- NDTMS technical definitions – provides the full list of fields that are required in the CSV file and the verification rules for each item

- NDTMS geographic information – provides the locality information eg UTLA of residence

- NDTMS business definitions – provides the explicit definition of each of the fields we collect to ensure data is consistent. There is a separate definitions document for each of the datasets: community adult, community young people and adult and young people secure settings

2. Change Control

Each significant change to the NDTMS dataset is allocated a letter. The current version (commonly referred to as NDTMS dataset R) for national data collection will come into effect on 1 April 2024.

As this document is the ultimate definition for NDTMS reference data the behaviour of the NDTMS system must strictly adhere to the latest approved version of this document on NDTMS.net.

For those data items defined by OHID (internal data), the details contained in this document are the master definitions of such data, extending to issues such as upper/lower case, hyphenation and punctuation.

For those data items not defined by OHID (external data – see Appendix B) this document defines the owner of the master data.

Y	Yes – IPS client has consented	A client can consent to share their data with NDTMS and not consent to providing data to the IPS scheme	AD, YP	2

3.7 Full postcode of residence (IPS) - IPSPC

IPS full postcode is used to establish/validate the geographic areas in which a client is resident. Full postcodes should only be submitted if the client has given IPS consent and must be separated by a space eg NW7 3AB.
Default post code for clients with no fixed abode is ZZ99 3VZ.
Dataset inclusion: AD, YP

3.8 Postcode – PC

Postcode mappings are used to establish/validate the geographic areas in which a client is resident. Only partial postcodes should be submitted and must be separated by a space eg NW7 3.
Default post code for clients with no fixed abode is ZZ99 3VZ (submitted partially as ZZ99 3).
Dataset inclusion: AD, YP

3.9 Upper tier local authority – UTLA

A list of upper tier local authority codes currently used for NDTMS is given in the NDTMS Geographic Information document.
Dataset inclusion: AD, YP

3.10 Lower tier local authority – LTLA

A list of lower tier local authority codes currently used for NDTMS is given in the NDTMS Geographic Information document.
Dataset inclusion: AD, YP

5. Outcome Profiles

5.1   Treatment Outcomes Profile (TOP)

The TOP (Treatment Outcomes Profile) was developed as a clinical outcome monitoring tool to measure change and progress in key areas of the lives of people being treated in drug and alcohol services. It contains 20 questions referring to client's substance use, injecting behaviour, health and quality of life to be collected at start, reviews, exit and post treatment exit.

These items should be completed for all adult clients receiving structured treatment. For young people's services the YPOR should be completed.

Where TOP is shown for items on the YPOR, this denotes a shared CSV file header with the same question on the TOP form.

5.2 Young People's Outcomes Record (YPOR)

The YPOR (Young People's Outcomes Record) was developed to assess changes to drug and alcohol use and wellbeing over the period of engagement with specialist services.

These items should be completed for all young people receiving specialist substance misuse interventions. They should be collected once at the start of treatment and once again at the end. Should localities choose to complete this form at care plan reviews as well I order to monitor progress, this is acceptable but is not mandatory.

Where (TOP) is shown for items on the YPOR, this denotes a shared CSV file header with the same question on the TOP form.

Appendix A: Drug codes and names

Individuals presenting to adult alcohol and drug treatment services are categorised by the substances they cite as problematic at the start of treatment. The following criteria categorises them as:

- any mention of opiate use in any episode would result in the client being categorised as an OPIATE client (irrespective of what other substances are cited)

- clients who present with non-opiate substances (and not opiates or alcohol) will be classified as NON-OPIATE ONLY

- clients who present with a non-opiate substance and alcohol (but not opiates) recorded in any drug in any episode in their treatment journeys will be classified as NON-OPIATE AND ALCOHOL

- clients who present with alcohol and no other substances will be categorised as ALCOHOL ONLY
